

**METHOD AND APPARATUS USING MULTIPLE SENSORS  
IN A DEVICE WITH A DISPLAY**

ABSTRACT OF THE DISCLOSURE

5           In a device having a display, at least one  
sensor signal is generated from a sensor in the  
device. One or more context values are then  
generated from the sensor signal. The context values  
indicate how the device is situated relative to one  
10 or more objects. At least one of the context values  
is then used to control the operation of one or more  
aspects of the device.
